

I am opposed to BPL technology. As a licensed amateur radio operator, also a licensed M.A.R.S. station, I am concerned about RFI.... Not only for hobby use, but health and welfare traffic, emergency communications, etc. I would urge the Commission members to review accurate test results prior to stating/voting their position. There is too much disparity in test results of RFI supplied by the BPL vendors and the ARRL to make sense. I plead with the FCC to have these tests results reviewed, and perhaps the tests done over to verify which set of results are accurate, and make an informed decision. Sadly, at least one BPL vendor is commenting that this interference is not harmful, nor that it falls in the realm of the FCC. Opinions and attitudes like this will serve only a company facing substantial financial gain.

I sincerely hope that the FCC will protect Amateur Radio as we know it. The pool of technical people it has generated, as well as other necessary occupations it has provided are many. The service to this great nation Amateur Radio has provided is well documented.

I hereby ask the FCC to consider the above comments before acting on BPL.

Sincerely,

Sigmond B. Markowski Jr.

Lemont, IL
